

# Quantum Learning Model

## Quantum Learning is a Facilitated Experience Centric Learning Model

One of a teacher's roles is to help others learn.  
How we do this is founded on:

- \* An understanding of **how** people learn.
- \* An understanding on **what** they are trying to learn.

In an **experience centric learning environment**, an instructor is a:

- \* **Designer** - Designs the learning environment, the event on the mountain, the lesson, the **"IT"**
- \* **Relationship Builder** - Helps form the learning connection, the community, the **"TOGETHER"**
- \* **Cheer Leader** - Supports the emerging action, the experience, the **"DOING"**, with enabling, encouraging, positive **"EMOTIONS"** which develops personal and group energy leading to learning.

## Highlights

- \* Skiing skills are **open skills** which are acquired and executed through **experience**, through skiing.
- \* The means that the focus of the learning needs to be **outcome** based, success on the snow and terrain, not form and maneuver based.
- \* Communicating with students via **body sensory, enabling language** that is easy to understand and do, helps students become aware of sensations and the forces they are moving in.
- \* Skiing is learned by **doing and feeling**, not talking.
- \* The talking and listening time for students and teachers should be about **50%-50%** with **reciprocal** teaching for honest feedback.
- \* Student effort combined with instructor encouragement will lead to new skill development and **engagement and energy**.
- \* New skills will feel **different** to the student and these are feelings that the student should be encouraged to seek.
- \* Success and change leads to more energy and engagement with the student **actively guiding their own learning** as they learn to focus and feel the snow, their bodies and the forces.
- \* Energy needs to be managed through oscillation, in a **positive, encouraging atmosphere**.
- \* **Emotions are powerful motivators that come from our soul that enable learning. Emotions empower the experience.**

**Quantum Learning  
is a Facilitated  
Experience Centric Learning Model**

Quantum = The essence

**Experience Centric Learning** requires acceptance of paradoxical thinking.

Do you need to know how to turn to turn?  
... No.

Will feeling good improve learning and performance? .... Yes.

*“Teaching is not about putting knowledge in people, it is about helping them acquire wisdom.” - Horst Abraham*
